What Owners are Saying About the 2003 Lexus LS

"Best Vehicle Made !!"

"I have a 2002 LS430 with 60K miles. Not a single problem. I've owned Mercedes (always in the shop), BMW (maintenance nightmare), JAG (just plain junk), AUDI (pretty good car) but none of them compare to the LS430. The cars just DO NOT break down. I also have an LS400 that is an outstanding vehicle.. just not as many goodies as the LS430. If you are considering purchasing an LS430, you will not be disappointed."

"Great luxury Vehicle"

"I was taking my 05 4runner for inspection when i noticed this beauty for sale at a local dealership. I ve had my eyes on this model for years so i went in an took it for a test drive on the highway.I was quite surprise with the acceleration on this ride and therefore was immediately SOLD. It didnt take alot of convincing from my wife once she sat in it and took it for a short spin.So i traded my 95 Lexus ls 400 with 285 000 miles for this 05 ls 430 with 111 000 miles.After owning this car for a little under 2 years we had no problems except an AC/filter for cooling system that needed replaced. i just love driving this car...."

"Love this car!"

"i've owned this car for 9 years and It is a fabulous ride. it is so comfortable And mine does have cup holders. I have been faced with near accidents in which I have had to react quickly and the car handles like a dream. The drawbacks were the removal of Lexus link system. This was a major selling feature. Another drawback was the cost of updating of the navigation system which Lexus wanted 1000.00 to do it. We felt the cost was out of line. The last drawback was having the voice activation working only 2 percent of the time until I gave up. Regardless of the drawbacks I still love love love this car! I would definitely recommend this car to a friend!"

Tested vehicle: **2001 Lexus LS 430 4-door**

Rating applies to 2001-06 models

The Lexus LS was redesigned for the 2001 model year and renamed the LS 430 because the engine size was increased.

All 2001-06 LS 430 models manufactured after December 2000 include a design change to prevent damage to the wiring harness connecting crash sensors involved in safety belt crash tensioner activation and airbag deployment. (Information about when a specific vehicle was manufactured is on the certification label typically affixed to the car on the driver door or adjacent B-pillar.)

The LS 430 was evaluated in two 40 mph frontal offset crash tests. One car was manufactured before the wiring harness change; the other after the change, following discussions with Lexus. Due to the similarity of results, this evaluation covers both tests.

Action shot taken during the frontal offset crash test.

The dummy's position in relation to the steering wheel and instrument panel after the crash test indicates that the driver's survival space was maintained well.

Smeared greasepaint indicates where the dummy's head hit the roof rail during rebound in the second test. Head acceleration from this hit was low.

Intrusion into the driver's space was minimal, and all leg and foot injury measures were low.
