2023 Subaru Outback Review

By **Colin Ryan** ⓘ

Updated January 30, 2025

Pros

- Standard all-wheel drive
- Highly practical
- Strong resale value

Cons

- Engine stop/restart function could be smoother

What's New?

- Updated styling, safety
- Wireless Apple CarPlay/Android Auto

All of the qualities contributing to the Outback's popularity are still here — things like standard all-wheel drive, strong resale values, safety, space, practicality, and attractive pricing. And since no one buys a [Subaru](#) for its looks alone, its 2023 mid-generation revamp shouldn't send potential customers scurrying elsewhere.

If anything, these changes might bring newcomers into the Subaru fold. Not necessarily because of the revised headlights, but more perhaps

2023 Subaru Outback Safety

Safety Features & Technology

EyeSight

This is Subaru's set of standard driver assistance features that comes in every new Outback SUV. It includes forward collision warning with automatic emergency braking, lane-departure warning/lane-keeping assistance, and adaptive cruise control with lane centering.

Blind-spot monitoring with rear cross-traffic alert

Optional at the Premium level, standard in higher trims of the 2023 Outback SUV range, this system helps prevent drivers from making unsafe lane changes. Rear cross-traffic alert is great when reversing out of a parking spot. And for 2023, automatic emergency steering is included.

LCD smart rearview mirror

Only available in Touring and Touring XT versions of the 2023 Outback SUV, sadly. But it's a cool feature, replacing the traditional rearview mirror with a screen that shows a clear view of what's behind, only without any rear pillars, cargo, or passengers' heads getting in the way.

The dummy's head contacted the right side of the frontal airbag but began to move into the gap between the frontal and side curtain airbags, leaving the head vulnerable to contact with forward structure. The inflated side curtain airbag has sufficient forward coverage to protect the head from contact with side structure and outside objects.

View of the vehicle after the crash showing the airbags and damage to the occupant compartment.

The rear passenger dummy's head approached the front seatback, which increases the risk of head injuries.

Rear passenger dummy injury values indicate a low risk of injury to the head or neck and chest. During the crash, the shoulder belt remained in an ideal position on the dummy's chest.

The rear passenger dummy's lap belt moved from the ideal position on the pelvis onto the abdomen, increasing the risk of abdominal injuries.

During rebound the rear passenger dummy's head moved outside of the side curtain airbag and contacted the rear window door trim. The head protection is inadequate and puts the head at risk of possible contact with outside objects.

High beams

On the straightaway, visibility was fair on the right side of the road and inadequate on the left side. On curves, visibility was good in all 4 tests.

High-beam assist compensates for some limitations of this vehicle's low beams on both left curves.
