2023 Honda CR-V Depreciation

Annual Depreciation is an estimation of what your vehicle's value might be over time based on an average of similar vehicles. Estimations are calculated by comparing Kelley Blue Book Private Party Values of vehicles similar to yours over time, as well as forecasts from Manheim Auction data comparing current and projected auction values against current Kelley Blue Book Private Party and Trade-In Values. This is not a guarantee of actual depreciation. Local weather conditions, market factors and driver performance will also impact your vehicle's actual depreciation.

2023 Honda CR-V Safety

Safety Features & Technology

Forward collision warning

The standard set of driver aids in every new CR-V compact SUV is called Honda Sensing. It includes forward collision warning with automatic emergency braking with pedestrian detection, plus road departure mitigation, lane-departure warning, and adaptive cruise control with a low-speed follow function.

Blind-spot monitoring with rear cross-traffic alert

This is another component of the standard Honda Sensing array, warning drivers of vehicles in adjacent lanes as well as anything approaching while reversing the CR-V out of a parking space.

Low Speed Braking Control

One of the extra features in the EX-L trim, this includes front and rear parking sensors. If the CR-V is being maneuvered too close to a potential hazard, there are audible and visual warnings, then an automatic emergency stop if necessary, holding the brakes for a few seconds. It operates between 2 mph and 4 mph.

View of the vehicle after the crash showing the airbags and damage to the occupant compartment.

The rear passenger dummy's head remained a safe distance from the front seatback.

Rear passenger dummy injury values indicate a low risk of injury to the head or neck and a moderate risk of injury to the chest. During the crash, the shoulder belt moved too far upward toward the dummy's neck, compromising the effectiveness of the rear restraint system.

The rear passenger dummy's lap belt moved from the ideal position on the pelvis onto the abdomen, increasing the risk of abdominal injuries.

During the crash, the left rear seat pan moved forward and rotated downward due to deformation in the brackets that secure it to the seat back.

Distance at which headlights provide at least 5 lux illumination:

Low beams

On the straightaway, visibility was fair on both sides of the road. On curves, visibility was good on the sharp left curve and fair on the gradual left and both right curves.

The low beams never exceeded glare limits.

High beams

On the straightaway, visibility was good on both sides of the road. On curves, visibility was good on the gradual left curve and fair on the sharp left and both right curves.

High-beam assist compensates for some limitations of this vehicle's low beams on the straightaway and all 4 curves.
