Safety Features & Technology

EyeSight

This is Subaru's array of driver assistance features. It isn't available with the manual transmission, but comes with the automatic. It includes forward collision warning with automatic emergency braking, lane-departure alert/lane-keeping assistance, and adaptive cruise control with lane centering.

Blind-spot monitoring with rear cross-traffic alert

This system warns drivers of vehicles approaching from behind, either in adjacent lanes or at right angles when reversing out of a parking space. It's optional in the Premium and Sport trims, standard in the Limited and Hybrid models.

Lower leg/foot	G
Driver restraints and dummy kinematics	G

Action shot taken during the Institute's driver-side small overlap frontal crash test.

The dummy's position in relation to the door frame, steering wheel, and instrument panel after the crash test indicates that the driver's survival space was maintained very well (Institute test car shown).

The frontal and side curtain airbags worked well together to keep the head from coming close to any stiff structure or outside objects that could cause injury (Institute test shown).

The driver's space was maintained well in both tests, and risk of injuries to the dummy's legs and feet was low.

Small overlap front: passenger-side

Tested vehicle: **2017 Subaru Impreza 2.0i Premium wagon 4wd**

Rating applies to 2018-23 models

The Subaru Impreza was redesigned for the 2017 model year and the Subaru Crosstrek was redesigned for the 2018 model year. Passenger-side small overlap frontal ratings are assigned by the Institute based on a test conducted by Subaru. Ratings apply to both the 4-door sedan and wagon versions of the Impreza as well as 2018 and later models of the Crosstrek wagon.

The Subaru Crosstrek Hybrid, a plug-in hybrid electric variant of the Crosstrek wagon, was introduced in the 2019 model year. Ratings also apply to the Crosstrek Hybrid.

View of the vehicle after the crash showing the airbags and damage to the occupant compartment.

The rear passenger dummy's head approached the front seatback, which increases the risk of head injuries.

Rear passenger dummy injury values indicate a moderate risk of injury to the head or neck and a likely risk of injury to the chest. During the crash, the shoulder belt remained in an ideal position on the dummy's chest.

The rear passenger dummy's lap belt moved from the ideal position on the pelvis onto the abdomen, increasing the risk of abdominal injuries.

Low-beam headlight type	LED projector
High-beam headlight type	LED projector
Curve-adaptive?	Yes
High-beam assist?	Yes
Overall rating	G

Distance at which headlights provide at least 5 lux illumination:

Low beams

On the straightaway, visibility was fair on both sides of the road. On curves, visibility was good on both right curves and inadequate on both left curves.

The low beams never exceeded glare limits.

High beams

On the straightaway, visibility was good on both sides of the road. On curves, visibility was good on both right curves and fair on both left curves.

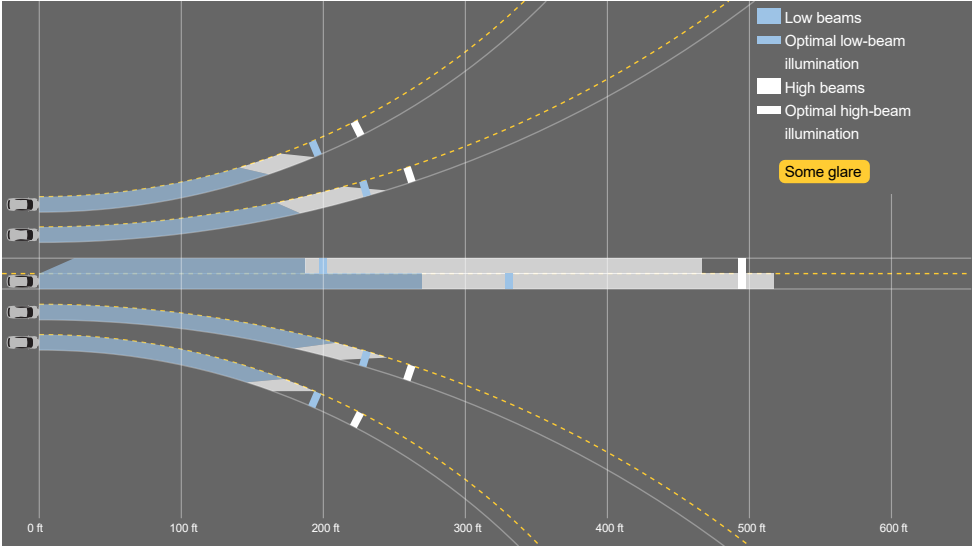

High-beam assist compensates for some limitations of this vehicle's low beams on the straightaway and on both left curves.

Making roads and vehicles safer for everyone.

The **Insurance Institute for Highway Safety (IIHS)** is an independent, nonprofit scientific and educational organization dedicated to reducing deaths, injuries and property damage from motor vehicle crashes through research and evaluation and through education of consumers, policymakers and safety professionals.

The **Highway Loss Data Institute (HLDI)** shares and supports this mission through scientific studies of insurance data representing the human and economic losses resulting from the ownership and operation of different types of vehicles and by publishing insurance loss results by vehicle make and model.
