2019 Ford Escape Depreciation

Annual Depreciation is an estimation of what your vehicle's value might be over time based on an average of similar vehicles. Estimations are calculated by comparing Kelley Blue Book Private Party Values of vehicles similar to yours over time, as well as forecasts from Manheim Auction data comparing current and projected auction values against current Kelley Blue Book Private Party and Trade-In Values. This is not a guarantee of actual depreciation. Local weather conditions, market factors and driver performance will also impact your vehicle's actual depreciation.

2019 Ford Escape Safety

Safety Features & Technology

Safe and Smart Package

This optional package (on the SE and above) includes active cruise control, forward collision warning (and braking), lane-keep assist, a blind-spot warning and rain-sensing wipers together with automatic high-beam headlights.

SOS Post-Crash alert system

In the event of an airbag deployment (or the activation of a seatbelt pretensioner) this system turns on the Escape's hazard lights, unlocks its doors and sounds its horn to alert passersby and first responders to the vehicle's location.

Safety Canopy System

In a rollover accident, this system deploys side-curtain airbags for outside passenger head protection. They are designed to inflate between an occupant's head and the side window, even if that head is leaning toward the window.

Small overlap front: driver-side

Tested vehicle: **2017 Ford Escape SE 4-door 4wd**

Rating applies to 2017-19 models

The Ford Escape was redesigned for the 2013 model year. Beginning with 2017 models, the driver door hinge pillar was reinforced and the front-end structure was modified to improve occupant protection in small overlap frontal crashes.

Driver restraints and dummy kinematics

The dummy's head contacted the frontal airbag but started to slide off the left side because the seat belt allowed excessive forward excursion of the head and torso. The side curtain airbag deployed and has sufficient forward coverage to protect the head from contact with side structure and outside objects. The side torso airbag also deployed. **A**

Action shot taken during the driver-side small overlap frontal crash test.

The dummy's position in relation to the door frame, steering wheel, and instrument panel after the crash test indicates that the driver's survival space was maintained reasonably well.

The dummy’s head contacted the frontal airbag but then slid partway off the left side, allowing the head to move into the gap in coverage between the frontal and side curtain airbags.

Intrusion into the driver's space was reasonably well controlled, and risk of injuries to the dummy's legs and feet was low.

Small overlap front: passenger-side

Tested vehicle: **2018 Ford Escape SE 4-door 4wd**

Rating applies to 2013-19 models

The Ford Escape was redesigned for the 2013 model year. Although Ford reinforced the structure starting with the 2017 model year on the driver side to improve occupant protection in small overlap frontal crashes, no such changes were made on the passenger side.

Driver restraints and dummy kinematics	**G**

Action shot taken during the passenger-side small overlap frontal crash test.

The dummy's position in relation to the door frame and dashboard after the crash test indicates that the passenger's survival space was not maintained well.

The dummy's head contacted the frontal airbag but then rolled around to the right. The side curtain airbag did not deploy, uncommon for 2018 model year and later vehicles.

Extensive intrusion of the dashboard and door hinge pillar contributed to a likely risk of injury to the right hip.

Moderate overlap front: original test

Tested vehicle: **2013 Ford Escape SE 4-door 4wd**

Rating applies to 2013-19 models

The Ford Escape was redesigned for the 2013 model year. Two moderate overlap frontal tests of the Escape were conducted, one by the Institute and the other by Ford. Ratings are based on both tests.

Action shot taken during the Institute's moderate offset frontal crash test.

The dummy's position in relation to the steering wheel and instrument panel after the crash test indicates that the driver's survival space was maintained well (Institute test car shown).

Smeared greasepaint behind the dummy's head shows where the head was protected from hitting hard structures during rebound by the side curtain airbag in the Institute's test.

Intrusion into the driver's space was minimal in both tests, and all leg and foot injury measures were low.

Low-beam headlight type	HID projector
High-beam headlight type	HID projector
Curve-adaptive?	No
High-beam assist?	Yes
Overall rating	**A**

Distance at which headlights provide at least 5 lux illumination:

Low beams

On the straightaway, visibility was good on the right side of the road and fair on the left side. On curves, visibility was fair on the sharp left and both right curves and inadequate on the gradual left curve.

The low beams never exceeded glare limits.

High beams

On the straightaway, visibility was good on the right side of the road and fair on the left side. On curves, visibility was fair on the gradual right and gradual left curves and inadequate on the sharp right and sharp left curves.

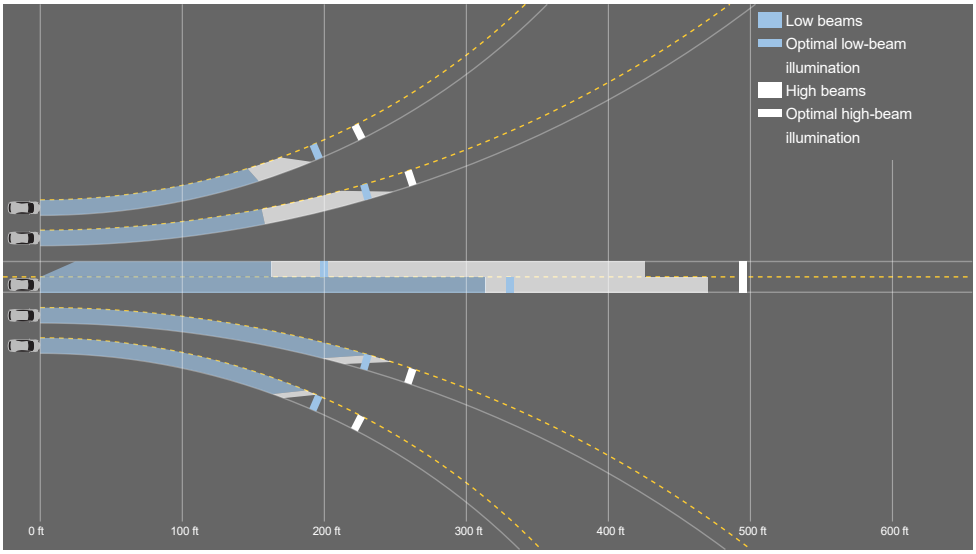

High-beam assist compensates for some limitations of this vehicle's low beams on the straightaway and all 4 curves.
