By **Allyson Harwood**

Updated January 30, 2025

Pros

- Upper trim levels could get pricey

While some larger subcompact SUVs skew toward city life and errand-running, the Bronco Sport is designed for

Small overlap front

The small overlap front evaluation consists of a driver-side and a passenger-side component.
If the results of the two evaluations differ, then the combined small overlap rating is equal to the lower rating.

Driver-side

Tested vehicle: **2021 Ford Bronco Sport XLT 4-door 4wd**
Rating applies to 2021-26 models

The Ford Bronco Sport was introduced in the 2021 model year. Driver-side small overlap frontal ratings are assigned by the Institute based on a test of a 2021 Bronco Sport conducted by Ford.

View of the vehicle after the crash showing the airbags and damage to the occupant compartment.

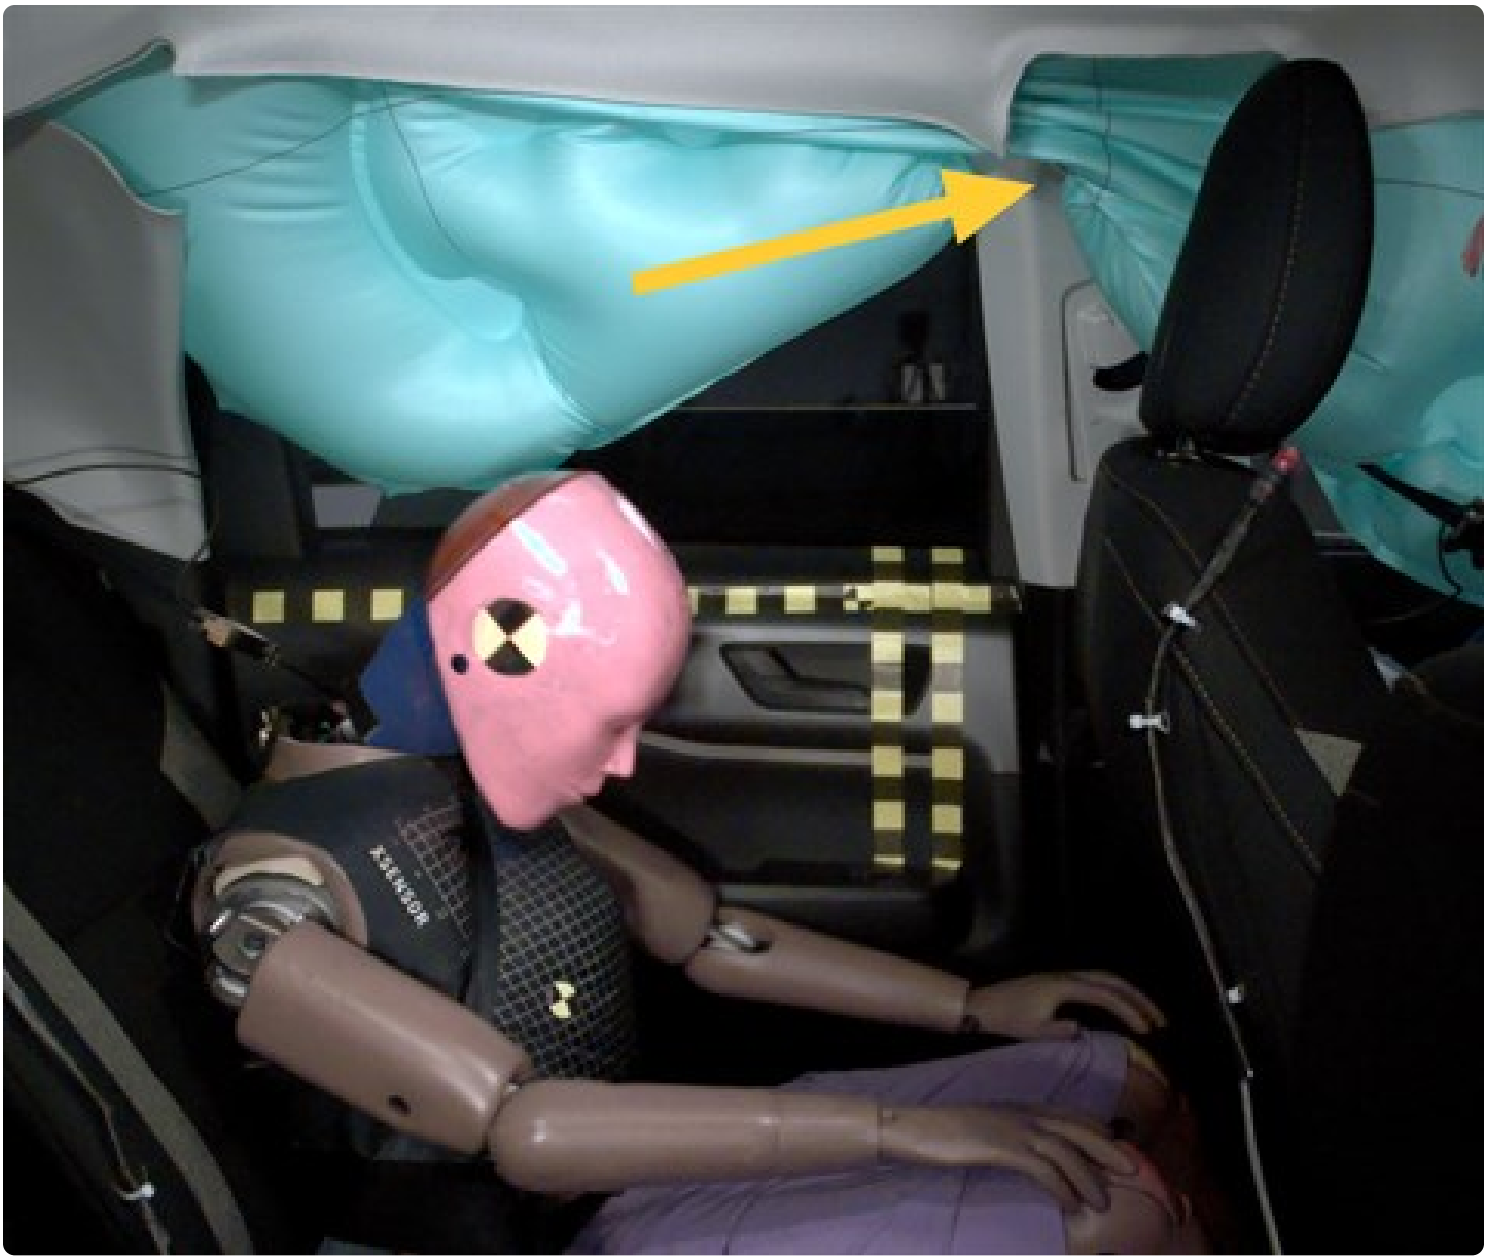

The rear passenger dummy's head remained a safe distance from the front seatback.

Rear passenger dummy injury values indicate a moderate risk of injury to the head or neck and chest. During the crash, the shoulder belt remained in an ideal position on the dummy’s chest.

The rear passenger dummy's lap belt moved from the ideal position on the pelvis onto the abdomen, increasing the risk of abdominal injuries.

Early in the crash, a temporary restriction in deployment of the side curtain airbag occurred. Ford has implemented changes in the production process to help prevent this from happening.

Headlights

Trim level(s): All trims

Low-beam headlight type	LED projector
High-beam headlight type	LED projector
Curve-adaptive?	No
High-beam assist?	Yes
Overall rating	**G**

Distance at which headlights provide at least 5 lux illumination:

Low beams

On the straightaway, visibility was good on both sides of the road. On curves, visibility was good on both right curves and fair on both left curves.

The low beams never exceeded glare limits.

High beams

On the straightaway, visibility was good on both sides of the road. On curves, visibility was good on both right curves and fair on both left curves.

High-beam assist compensates for some limitations of this vehicle's low beams on the straightaway and on both left curves.

Making roads and vehicles safer for everyone.

The **Insurance Institute for Highway Safety (IIHS)** is an independent, nonprofit scientific and educational organization dedicated to reducing deaths, injuries and property damage from motor vehicle crashes through research and evaluation and through education of consumers, policymakers and safety professionals.

The **Highway Loss Data Institute (HLDI)** shares and supports this mission through scientific studies of insurance data representing the human and economic losses resulting from the ownership and operation of different types of vehicles and by publishing insurance loss results by vehicle make and model.

Both organizations are wholly supported by these auto insurers and insurance associations.
