Driver-side

Rating applies to 2011-27 models

The Dodge Durango was redesigned for the 2011 model year.

Driver restraints and dummy kinematics The dummy's face remained in contact with the frontal airbag, but its head still rolled around the left side of the steering wheel toward the intruding A-pillar. The side curtain airbag deployed but does not have sufficient forward coverage to protect the head from contact with forward side structure and outside objects. The side torso airbag deployed.	**A**

Action shot taken during the small overlap frontal crash test.

The dummy's position in relation to the door frame, steering wheel, and instrument panel after the crash test indicates that the driver's survival space was not maintained well.

The dummy’s head contacted the frontal airbag but then rolled around to the left side. The side curtain airbag does not extend far enough forward toward the A-pillar to protect the head from possible contact with forward side structure.

Parking brake pedal, door hinge pillar, and instrument panel intrusion was extensive and contributed to a high risk of injury to the left lower leg, a significant risk to the left foot, and a moderate risk to the left hip.
