Action shot taken during the driver-side small overlap frontal crash test.

The dummy's position in relation to the door frame, steering wheel, and instrument panel after the crash test indicates that the driver's survival space was maintained very well.

The frontal and side curtain airbags worked well together to keep the head from coming close to any stiff structure or outside objects that could cause injury.

The driver's space was maintained well, and risk of injuries to the dummy's legs and feet was low.

View of the vehicle after the crash showing the airbags and damage to the occupant compartment.

The rear passenger dummy's head approached the front seatback, which increases the risk of head injuries.

Rear passenger dummy injury values indicate a likely risk of injury to the head or neck and chest. During the crash, the shoulder belt remained in an ideal position on the dummy’s chest.

The rear passenger dummy's lap belt remained in the ideal position on the pelvis.

During rebound the rear passenger dummy's head moved outside of the side curtain airbag. The head protection is inadequate and puts the head at risk of possible contact with outside objects.

Tested vehicle: **2022 Jeep Grand Cherokee Trailhawk 4-door 4wd**
Rating applies to 2022-23 models built before April 2023

The Jeep Grand Cherokee (2-row) was redesigned for the 2022 model year. A fuel leak occurred during the crash test because the underbody adjacent to the fuel tank deformed, causing a sharp sheet metal edge to puncture the fuel tank. Stellantis has identified the issue and implemented structural modifications beginning with 2023 models built after March 2023 (Information about when a specific vehicle was manufactured is on the certification label typically affixed to the car on the driver door or adjacent B-pillar.)
